CreateSpace Independent Publishing Platform. Paperback. Book Condition: New. This item is printed on demand. Paperback. 174 pages. Dimensions: 11.0in. x 8.5in. x 0.4in.Since introduction of cytologic screening for cervical cancer using the Papanicolaou (Pap) test in the 1950s, the incidence of invasive cervical cancer in the United States has fallen more than 100. No other cancer screening program has been more successful. This fall occurred despite an increase in risk factors for cervical cancer, such as younger age at initiation of sexual intercourse, more sexual partners in a lifetime, and greater prevalence of human papilloma virus (HPV) infection and cigarette smoking. Success in prevention reflects three factors: (1) progression from early cellular abnormalities, termed low-grade dysplasia, through more severe dysplasia, to carcinoma in situ and invasive cancer is generally slow, allowing time for detection; (2) associated cellular abnormalities can be identified; and (3) effective treatment is available for premalignant lesions. Consequently, invasive squamous cell carcinoma of the uterine cervix is a highly preventable disease. Introduction of screening programs in populations nave to screening reduces cervical cancer rates by 60 to 90 within three years of implementation. This reduction of mortality and morbidity with introduction of screening with the Pap test is consistent and dramatic across populations. As a result, Pap testing is one of the few preventive interventions that has received an . A. recommendation from the US Preventive Services Task Force (USPSTF) in the absence of randomized trials demonstrating effectiveness. In the United States, approximately 12, 800 new cases of cervical cancer are diagnosed and 4, 800 deaths occur each year. Incidence of cervical cancer is decreasing; US rates have decreased from 14. 2 new cases per 100, 000 women in 1973 to 7. 8 per 100, 000 in 1994. For each woman with invasive disease, there will be...
