In deference to the wish of the teachers of mathematics of the Province, this Geometry is divided into Books with numbered propositions. While the theoretical course is complete in itself, it is assumed that its study has been preceded by the usual course in drawing and measurement. A considerable number of practical problems are given in the exercises. These should be worked out carefully, and, in fact, all diagrams should be accurately and neatly made. The book contains an abundant supply of carefully selected and graded exercises. Those given in sets throughout the Books will be found suitable for the work of average classes, and just about sufficient in number to fix the subject-matter of the propositions in the minds of the pupils. All the problems contained in the miscellaneous collections at the ends of the Books could be worked through by a few of the best pupils only, and should be used also by the teachers as a store from which to draw suitable material for review purposes from time to time. While the requirements of class-work have been constantly kept in mind in the choice of proofs, it should not be assumed that other proofs, just as good, cannot in many cases be given.
