My persistence paid off - I chanced upon the website of Dr Amy Yasko. As far as I know, her protocol is the only one that addresses the molecular mechanisms. How does Parkinson s disease arise? The confluence of three factors - genetic predisposition, microbial load, and toxin load - generates neurological diseases in general - and Parkinson s disease in particular. The factors are jointly necessary but not sufficient separately to express the disease. My illness arose from my specific DNA mutations. My mutations blocked some processes, creating imbalances in intermediates and end-products, thus messing up the machinery in my cells. Toxins - like heavy metals such as mercury, aluminium - blocked some additional processes in my cells, even in the absence of a mutation. Microbes sequestered heavy metals making it difficult for my body to find them in order to eject them. The key mutation of my CBS gene (cystathionine-beta-synthase) started my Parkinson s illness.
