RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 104 pages. Original publisher: Washington, D. C. : United States Environmental Protection Agency, Office of Pesticide Programs, Environmental Fate and Effects Division, 2006 OCLC Number: (OCoLC)71342326 Subject: Salamanders -- Effect of pesticides on -- United States. Excerpt: . . . A number of degradates of atrazine were detected in laboratory and field environmental fate studies. Deethyl-atrazine (DEA) and deisopropyl-atrazine (DIA) were detected in all studies, and hydroxy-atrazine (HA) and diaminochloro-atrazine (DACT) were detected in all but one of the listed studies. Deethylhydoxy-atrazine (DEHA) and deisopropylhydroxy-atrazine (DIHA) were also detected in one of the aerobic studies. All of the chloro-triazine and hydroxy-triazine degradates detected in the laboratory metabolism studies were present at less than the 10 of applied that the Agency uses to classify degradates as major degradates (U. S. EPA, 2004), however, several of these degradates were detected at percentages greater than 10 in soil and aqueous photolysis studies. Insufficient data were available to estimate half-lives for these degradates from the available data. The dealkylated degradates are more mobile than parent atrazine, while HA is less mobile than atrazine and the dealkylated degradates. 2. 4. 2 Mechanism of Action Atrazine inhibits photosynthesis by stopping electron flow in Photosystem II. Triazine herbicides associate with a protein complex of the photosystem II in chloroplast photosynthetic membranes (Schulz et al. , 1990). The result is an inhibition in the transfer of electrons that in turn inhibits the formation and release of oxygen. 2. 4. 3 Use Characterization An analysis of available usage and land cover information, including extensive discussions with local experts in the fields of agriculture and soil science, was completed to determine which...
