Reviews

An incredibly awesome publication with perfect and lucid reasons. It can be writter in simple phrases and not confusing. I am just delighted to let you know that this is actually the very best publication i actually have study during my very own lifestyle and could be he best publication for actually.
(Paula Gutkowski)

A COMPARATIVE AND EXPERIMENTAL STUDY OF RACILLI PRODUCING RED PIGMENT: A DISSERTATION SUBMITTED TO THE FACULTIES OF THE GRADUATE SCHOOLS OF ARTS, LITERATURE, AND SCIENCE, IN CANDIDACY FOR THE DEGREE OF DOCTOR OF

Brand New Book ***** Print on Demand *****.Excerpt from A Comparative and Experimental Study of Racilli Producing Red Pigment: A Dissertation Submitted to the Faculties of the Graduate Schools of Arts, Literature, and Science, in Candidacy for the Degree of Doctor of Philosophy The mechanical difficulties of observing structures so minute as bacteria have led to the accumulation of much differential detail, and to an insistence on all points of unlikeness in physiological characters or cultural reactions. Further, the lack of uniform methods and standards of comparison has tended to produce an overwhelming multiplicity of inadequate species-descriptions, in which any slight variation from existing descriptions, e. g. as regards formation of colonies on gelatin, has been erected into a character of specific importance. But with the publication of Marshall Ward s series of studies on Thames bacteria, of Fu11er and Johnston s work on the bacteria of the Ohio River, and of Jordan s paper on some 600 germs found in the Mississippi River, a check has been put to indiscriminate multiplication of bacterial species. Recently, again, the demonstration of linking intermediate paratyphoid and enteritidis forms in the colon-typhosus group, and of the marked range of individual variation occurring in other organisms, has rendered especially important the questions of variability and of the actual lines between species, varieties, and races. The chromogenic bacteria afford, from the fact of their pigmentation, a particularly suitable field for observation; and the non-parasitic nature of the special group here considered is another factor favorable for comparative and for variation study. The warping effect of parasitic life upon the physiological and morphological character of organisms is well known, and more characteristic results are to be anticipated from the study...
